

The emergency contraception can not protect you from sexually transmitted infections. Condoms will. Use a condom when having sex.

You can get condoms free from Sexual Health Clinics or some GPs in Forth Valley. You can buy them from shops or pharmacies or order free condoms by post from this link.

Remember that it is your choice if you want to have sex or not. You should never have sex if you don't want to.

What you need to know about

Emergency Contraception

If you have had sex without using a contraceptive you may need to use emergency contraception.

Emergency contraception is for emergencies only. It can not be used as a regular method of contraception.

The emergency contraception pill is available from Central Sexual Health. It is also available free from most pharmacists in Forth Valley.

Emergency contraception is used to prevent pregnancy.

2. The IUD is sometimes called the coil. It is a small copper and plastic device which is put into your uterus. The coil must be fitted by a doctor or a nurse.

If you need the IUD you will have to attend a Sexual Health Clinic or speak to your GP.

There are 2 types:

1. Emergency contraception is one pill. It can be taken up to 5 days after having sex. It works better if you take it as soon as possible after sex.

When you are given emergency contraception you will get information and advice about other methods of contraception.
